

Perianaesthesia Nursing Fact Sheet

Perianaesthesia nursing encompasses both anaesthetic and recovery room experience. Our perianaesthetic staff are highly skilled professionals who thrive in a critical care environment.

We offer orientation tailored to suit individual needs and past experiences. Perianaesthesia staff rotate through all major specialties undertaken in the department, inline with your career aspirations and the clinical needs of the department. These rotations are reviewed regularly, providing staff with the opportunity to enhance their skills in a new area.

When staff change specialties, they are fully supported in their transition with supernumerary time allocated if required.

As a department we value our staff. We endeavour to maintain high staffing ratios, which is inline with the complexity of our patient population. We offer self rostering and strive to be flexible and supportive to the changing needs of our team.
